Durstons

See the difference with Durstons

For over 150 years we've been innovating, evolving and diversifying our Somerset-based business to meet the demands of our customers.

Today we're focused on paving the way for the future of compost. And the results speak for themselves with our peat-free range proven to deliver up to 150% bigger plants and 50% more blooms than standard mixes.

This performance is thanks to our passion for a sustainable, cost-effective product for customers alongside our no compromise approach to quality. We've invested in our operations, are committed to the best responsibly sourced ingredients, and deliver reliable and personal service. Plus, our mixes are rigorously tested to ensure consistent, trusted performance.

EXPERTISE

We make compost from our family farm in Somerset. That's it. And being focused on one thing means we bring all of our passion and knowledge to every bag.

QUALITY

Our no-compromise approach means we use responsibly sourced ingredients, high-quality manufacturing and friendly, helpful service so you can trust us to help you grow.

PERFORMANCE

We're proud to put our products forward to be tried and tested by independent experts, ensuring they perform for you each and every time.

Making a difference

A peat-free future

We're a family-run, sustainable manufacturer, dedicated to having a positive impact on our environment. That's why we've invested in new technology, R&D and expert support to take us into a fully peat-free future while delivering a range that continues to perform at the highest level.

Protecting our peatlands is important to support biodiversity and reduce carbon emissions. We continue to care for our peat bogs after the end of their life cycle by fully regenerating them to create new habitats for natural wildlife.

LEFT: New life at our retired peat bogs

We only work with suppliers who offer **sustainable** and renewable packaging solutions.

Our packaging is 100% recyclable, and our bags are made with 30% recycled material, as we advance towards a closed-loop economy.

Our revolutionary **Gro Fibre** increases water holding, air circulation and provides a perfect growing environment for roots.

Unlike other UK wood fibres, it's made from a single species of tree – the Loblolly Pine. Bark chips are refined through a unique, patented Thermodynamic process in a pressurised vessel, which creates singulated, small-diameter, long, thin strands with a large surface area. No colouration is added, so our wood fibres are naturally darker. And they blend easily with other materials to produce a light, fluffy, aesthetically pleasing finish. With quality-control checks every 30 minutes, we deliver the most consistent product on the market.

Our focus is on performance.

And it's about much more than just the superior performance of our growing media - compost that's independently proven to deliver more blooms and bigger plants than the competition.

For us, performance is about making a difference in whatever way we can. Whether it's for our partners, distributors or end customers, we perform at every level.

PERFORMANCE COMPOST
